

♦ Final Refined Version:

"Hello Sir , my name is Aman Raj, and I'm from Nalanda, Bihar. I'm just recent passout in B.Tech in Electrical and Electronics Engineering from Darbhanga College of Engineering. I have hands-on experience in backend integration, API development, and database management.

I have hands-on experience in full-stack development, I also worked remotely with Sure Trust where I developed a full-stack course platform and integrated an AI-powered chatbot using Python and the MERN stack.

Across these projects, I focused on building secure, scalable, and user-friendly systems. I've also been a finalist in three consecutive Smart India Hackathons, which gave me practical exposure to solving real-world problems.

I'm now looking to work in a professional team where I can contribute to backend development, API integration, and scalable system design using Python and Django or Flask."

I've also been a three-time finalist in the Smart India Hackathon, where I worked on secure, scalable, and real-time projects involving machine learning and public service systems.

One of my major projects was the Ashavirithi PMSSS Scholarship Portal, designed especially for students from Jammu & Kashmir and Ladakh. The goal was to reduce paperwork in the Prime Minister's Special Scholarship Scheme. We implemented Aadhaar e-KYC using open-source sandbox APIs for authentication, and applied a Random Forest machine learning model to predict scholarship eligibility. The tech stack included React, Bootstrap, jQuery on the frontend, and PHP (Laravel), and MySQL for the backend.

This project helped me apply my backend and ML skills in a real-world context, and taught me how to design systems that are both secure and user-friendly. I'm now excited to join a team where I can apply my Python and Flask/Django skills to build scalable backend systems."

Ashaviriti PMSSS Scholarship Portal

- Created a system that ensures access to scholarships by verifying students across different states.

For aadhar kyc we use sandbox api open source apis

- Used a Random Forest classification model to analyse scholarship data and determine students' eligibility based on their information.
- Designed a user interface with React, Bootstrap, and jQuery for the end of the system.
- Employed PHP, JavaScript, and Python, for the operations of the project.
- Tech Stack: Frontend - React, Bootstrap & jQuery, Backend - PHP, JavaScript & Python libraries, Database – MySQL
- PHP - Laravel Framework
- Frontend :- Bootstrap html css

Tip-off Application

April 2022 - Aug 2022

- Created an Android app that enables people to report activities anonymously to the authority ensuring communication.
- Added a function that lets users upload files related to the reported incidents, improving information sharing effectively.
- Included a questionnaire feature to promote health awareness among app users.
- Tech Stack: Frontend - XML, Backend - Java, Database - Firebase, IDE Android

Studio

AMAN RAJ

amanraj6221@gmail.com +91 8521562762 Bihar, India [LinkedIn](#) [GitHub](#)

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience in building and deploying secure, responsive web applications. Proficient in frontend and backend technologies including React.js, Node.js, Express.js, PHP, and MySQL, with applied expertise in RESTful APIs, Firebase, and MongoDB. Finalist in three consecutive Smart India Hackathons, with experience delivering scalable, real-world solutions in education and public sector domains. Certified in cybersecurity by IIT Kanpur and Cisco, with a focus on developing secure, high-performance applications from end to end.

SKILLS

- Programming Languages: JavaScript, PHP, Python, C, C++, Django
- Libraries & Frameworks: React.js, Tailwind CSS, Material-UI, Next.js, Express.js.
- Web Development: HTML5, CSS3, RESTful APIs, Git/GitHub, Responsive Design, Webpack.
- Database Management: Firebase, MongoDB, MySQL
- Testing & Debugging: React Testing Library, Chrome DevTools

WORK EXPERIENCE

Software Development Internship

CDAC- Kolkata | Onsite, Kolkata, India

April 2025 – Present

- Built a ticket/pass verification system with frontend-backend integration via form inputs and APIs, improving lookup accuracy and reducing manual processing errors by 40%.
- Implemented a real-time log dashboard to track valid/invalid lookups with export options (PDF, Excel, Word), increasing visibility and administrative efficiency by 60%.
- Designed an insights panel using Chart.js with AJAX-based filters for live data visualization, enhancing system usability and supporting data-driven decisions.

- Developed a web-based Voice-to-Text Converter using HTML, CSS, JavaScript, and Web Speech API, enabling real-time voice recognition and dynamic word parsing—boosting accessibility by 35%.
- Tech Stack: HTML, CSS, JavaScript, PHP, MySQL, Chart.js, Web Speech API, AJAX, Django

Full Stack – Developer Internship

Sure Trust | Remote, India

December 2024 – April 2025

- Collaborated with a cross-functional team to design and develop a full-stack web application enabling users to browse courses, view batch schedules, and interact with a real-time chatbot—boosting user engagement by 45%.
 - Engineered an AI-powered chatbot using Dialog flow and Python, integrated with the MERN stack (MongoDB, Express.js, React.js, Node.js), automating 60% of user interactions related to course inquiries and enrollment.
- Led seamless integration of chatbot functionalities across frontend and backend modules, leveraging REST APIs and Webhooks to deliver accurate and responsive NLP-based communication.
- Optimized website responsiveness and accessibility using React.js and CSS, enhancing mobile usability and reducing bounce rates by 30%.
- Implemented GitHub version control and CI practices to manage codebase efficiently, accelerating development cycles and reducing deployment errors by 25%
- Tech Stack: React.js, Node.js, Express.js, MongoDB, Dialog flow, Python, GitHub

PROJECT EXPERIENCE

Ashaviriti PMSSS Scholarship Portal

Sep 2024 – Dec 2024

- For students in J&K and Ladakh, a scalable system for digital scholarship disbursement was developed, improving transparency and cutting down on paperwork.

- Created a centralized database for easy student identification verification (Aadhaar e-KYC) and scholarship application documentation.
- Streamlined scholarship procedures by automating multi-tier verification and integrating government APIs.
- Added real-time tracking of scholarship application status with notifications via SMS and Gmail.
- Tech stack: database: MySQL, backend: PHP & JavaScript, frontend: React.js & jQuery

Inter-state Student Verification Solution

Sep 2024 – Dec 2025

- Created a system that ensures access to scholarships by verifying students across different states.
- Used a Random Forest classification model to analyze scholarship data and determine students' eligibility based on their information.
- Designed a user interface with React, Bootstrap, and jQuery for the end of the system.
- Employed PHP, JavaScript, and Python, for the operations of the project.
- Tech stack: database: MySQL, backend: PHP & JavaScript, frontend: React.js & jQuery

Smart India Hackathon (SIH) 2023 ([Certificate Link](#))

Smart India Hackathon (SIH) 2022 ([Certificate Link](#))

Cybersecurity Skilling Program (IIT Kanpur)

Cisco Networking Academy: Cybersecurity Essential, Python Programming

***"Hello Sir/Madam, my name is Aman Raj, and I am from Nalanda, Bihar. I recently completed my B.Tech in Electrical and Electronics Engineering from Darbhanga College of Engineering.

During my academic years, I discovered my passion for software development and shifted my focus towards backend engineering, full-stack development, and scalable systems.

I have hands-on experience in building secure, responsive web applications with technologies like React.js, Node.js, Express.js, PHP (Laravel), MySQL, MongoDB, Python, and Django/Flask.

In my recent internship at **CDAC Kolkata**, I developed a ticket/pass verification system with frontend-backend integration. I also implemented a real-time log dashboard with export options (PDF, Excel, Word) and built an insights panel with Chart.js and AJAX-based filters for live data visualization — improving system efficiency and supporting better decision-making.

During my remote internship with **Sure Trust**, I worked with a cross-functional team to build a full-stack course platform and integrated an AI-powered chatbot using Dialogflow and Python, based on the MERN stack. This automated 60% of course-related user queries, boosting user engagement.

I've also been a finalist in the **Smart India Hackathon (SIH)** for three consecutive years (2022, 2023, 2024), gaining hands-on experience in building real-world solutions.

One of my key SIH projects was the **Ashaviriti PMSSS Scholarship Portal**, aimed at reducing paperwork and streamlining the Prime Minister's Special Scholarship Scheme for students in Jammu & Kashmir and Ladakh. The system implemented Aadhaar e-KYC using open-source sandbox APIs, and used a Random Forest ML model to predict scholarship eligibility. The tech stack included React, Bootstrap, jQuery, PHP (Laravel), and MySQL.

Additionally, I developed an Android-based **Tip-off App** for anonymous public reporting, allowing users to upload files and fill out health questionnaires. This was built using Java, XML, and Firebase.

I also hold **cybersecurity certifications from IIT Kanpur and Cisco**, ensuring I follow best practices for secure coding and data privacy.

Overall, I bring strong skills in backend development, API integration, database management, and AI-driven features.

I'm now eager to join a professional team where I can contribute to backend development using Python, Django, Flask, or Node.js, and continue growing as a developer while solving real-world problems."**

ChatGPT

You said:

cursor ai

ChatGPT said:

Can you please clarify what you mean by "cursor ai"? Are you referring to:

1. Cursor (AI coding assistant) — a VS Code-like AI-powered code editor
2. Database cursor (like in SQL or Python for iterating over query results)
3. Mouse cursor with AI features (like smart pointer interactions)
4. Something else?

Just tell me a little more — I'll guide you! 🚀

You said:

basic question interview cursor ai

ChatGPT said:

Got it — you're asking for basic interview questions if you're applying for a role related to Cursor AI (the VS Code-like AI coding assistant).

Here are some basic questions that might come up in such an interview — for roles like developer, integrator, or even technical support related to Cursor AI:

General Questions about Cursor AI

1. What is Cursor AI? How does it differ from other code editors?
2. What are the main features of Cursor AI?
3. How does Cursor AI integrate with LLMs (Large Language Models)?
4. What are the benefits of using Cursor AI for software development?
5. Can you compare Cursor AI to GitHub Copilot or TabNine?
6. What kinds of languages and frameworks does Cursor AI support?
7. How does Cursor AI handle code completion, refactoring, and debugging?

8. Does Cursor AI offer collaboration tools for teams?

Technical (AI & LLM-related)

1. What is the role of an LLM in an AI-powered code editor?
 2. How does Context Awareness work in Cursor AI?
 3. How can AI-driven tools like Cursor AI help with legacy codebases?
 4. What are token limits, and why do they matter in tools like Cursor AI?
 5. What techniques can be used to improve the relevance of AI code suggestions?
-

User & Developer Experience

1. How can developers make the most of an AI code assistant?
 2. What are the risks of relying too much on AI code suggestions?
 3. How do you evaluate the quality of AI-generated code?
 4. How would you explain the ethical considerations of using AI-generated code?
 5. What is your experience working with AI code tools (GitHub Copilot, Replit AI, Cursor AI, etc.)?
-

Bonus

1. Have you used Cursor AI yourself? What did you like/dislike?
 2. How would you onboard a new dev team to Cursor AI?
 3. How would you improve Cursor AI — what feature would you add?
-

If you tell me the role (Software Engineer? Support? AI Integrator?) and experience level you're interviewing for, I can give you an even more targeted list! Want me to?

answer

ChatGPT said:

Sure! Let me provide sample answers for some of the basic Cursor AI interview questions:

1 What is Cursor AI? How does it differ from other code editors?

Answer:

Cursor AI is an AI-powered code editor built on top of VS Code. It integrates advanced large language models (LLMs) to provide intelligent code completion, refactoring, documentation, and debugging assistance. Compared to traditional editors, Cursor AI goes beyond syntax highlighting and simple auto-completion — it understands code context, can suggest entire functions, and can even refactor or explain code across files.

2 What are the main features of Cursor AI?

Answer:

Key features include:

- AI-driven code completion
- Intelligent refactoring
- Code search with understanding
- Auto-documentation
- AI chat for coding questions
- Multi-language support (JS, Python, Java, etc.)
- Git integration
- Seamless VS Code extension compatibility

3] How does Cursor AI integrate with LLMs?

Answer:

Cursor AI connects with LLMs like GPT-4 to provide contextual suggestions. It sends snippets of code, file structure, and recent edits to the LLM, which then returns intelligent completions or refactoring suggestions. The editor manages token limits and context windows to optimize relevance.

4] Benefits of using Cursor AI?

Answer:

- Speeds up development
 - Reduces boilerplate code
 - Helps onboard new developers
 - Improves code quality with smart refactoring
 - Assists in understanding legacy code
 - Acts as a real-time pair programmer
-

5] Compare Cursor AI with GitHub Copilot?

Answer:

Both provide AI-assisted coding, but Cursor AI offers:

- A full editor experience built for AI
 - Deeper context awareness
 - Stronger refactoring tools
 - Better file and project understanding
- Copilot is more of a plugin, whereas Cursor AI is an AI-first IDE.
-

6 How do you evaluate the quality of AI-generated code?

Answer:

I check:

- Code correctness through testing
 - Code style and readability
 - Consistency with project patterns
 - Security and performance implications
- AI is a helpful tool, but I always review its suggestions critically.
-

7 What risks exist with relying too much on AI code?

Answer:

- Possible introduction of bugs
 - Over-reliance can reduce developer learning
 - AI may suggest insecure or non-performant code
 - Legal/ethical risks (AI-generated code may have unclear licensing)
- Human review is always essential.
-

If you want, I can also give full mock interview Q&A or more deep questions (for senior-level roles). Just tell me! 🚀

tell me best introduction in 20 line indetail from above statement

ChatGPT said:

Here's the best 20-line detailed introduction you can speak or write in an interview — refined from your content — clear, structured, and professional:

****“Hello Sir/Madam, my name is Aman Raj, and I am from Nalanda, Bihar. I have recently completed my B.Tech in Electrical and Electronics Engineering from Darbhanga College of Engineering.**

During my academic journey, I developed a strong passion for software development, particularly in backend technologies, API integration, and building scalable systems.

I have hands-on experience as a full-stack developer and have completed internships at CDAC Kolkata and Sure Trust. At Sure Trust, I developed a full-stack course platform and integrated an AI-powered chatbot using Python and the MERN stack, which improved user engagement by 45%.

At CDAC Kolkata, I built a ticket/pass verification system with frontend-backend integration, a real-time log dashboard, and an insights panel using Chart.js and AJAX filters — improving system efficiency significantly.

I was also a three-time finalist in the Smart India Hackathon, where I contributed to real-world projects. One notable project is the *Ashaviriti PMSSS Scholarship Portal* for students of J&K and Ladakh. It featured Aadhaar e-KYC, used Random Forest ML models to predict eligibility, and streamlined government processes — built using React, PHP (Laravel), and MySQL.

Additionally, I created an anonymous *Tip-off App* for public reporting, integrating file uploads and health questionnaires — using Java, XML, and Firebase.

I am certified in cybersecurity by IIT Kanpur and Cisco, with a strong understanding of secure coding practices.

My core strengths lie in backend development with Python (Flask/Django), PHP, Node.js, database management (MySQL, MongoDB), and frontend frameworks like React.js.

I am now seeking an opportunity to work in a professional team where I can contribute to building secure, scalable backend systems and learn from experienced developers.***

If you want, I can also give you:

- ✅ 1-line intro for resume
- ✅ Short intro (4-5 lines) for HR
- ✅ Detailed version for technical round
- ✅ LinkedIn "About Me" version

Just tell me! 🚀

Here is your best 40-line detailed introduction — perfectly structured for technical and HR rounds — based on your PDF, your text, and your projects:

***"Hello Sir/Madam, my name is Aman Raj, and I'm from Nalanda, Bihar. I have recently completed my B.Tech in Electrical and Electronics Engineering from Darbhanga College of Engineering, under Bihar Engineering University.

I am a passionate full-stack developer with strong hands-on experience in building and deploying secure, scalable web applications. My core skills include backend development (Python, Django/Flask, PHP Laravel, Node.js, Express.js), frontend frameworks (React.js, Bootstrap, Tailwind), and database management (MySQL, MongoDB, Firebase). I am also proficient in building RESTful APIs, integrating third-party services, and working with cloud-based architectures.

Currently, I am working as a Software Developer Intern at CDAC Kolkata, where I have developed a ticket/pass verification system with real-time logging and insights dashboards using Chart.js and AJAX. I also built a voice-to-text web converter using the Web Speech API, improving accessibility features by 35%.

Earlier, I completed a Full Stack Developer Internship with Sure Trust, where I contributed to a complete course platform and developed an AI-powered chatbot integrated with the MERN stack (MongoDB, Express, React, Node) and Python Dialogflow. This project automated nearly 60% of user queries and enhanced user experience.

In addition to internships, I have completed virtual internships with Salesforce and Cisco, and also worked as an Emerging Technologies Intern (AI & Cloud) and a Cybersecurity Intern at Edunet Foundation. These experiences helped me deepen my understanding of modern cloud technologies and secure coding practices.

I am a three-time finalist in the Smart India Hackathon (2022, 2023, 2024). One of my flagship projects was the Ashaviriti PMSSS Scholarship Portal, which used Aadhaar e-KYC APIs and a Random Forest model for eligibility prediction — reducing paperwork and improving transparency for students in J&K and Ladakh. I also developed an Inter-State Student Verification Solution and an Android Tip-off App for anonymous reporting.

I am certified in Cybersecurity by IIT Kanpur and Cisco and always follow a 'security-first' approach in all my development work.

Beyond technical skills, I bring strong problem-solving abilities, the habit of writing clean and maintainable code, and experience working in agile environments using Git/GitHub for version control.

Currently, I am looking for a backend or full-stack developer role where I can contribute to developing scalable, secure applications using Python, Django/Flask, or MERN stack. I am very eager to work with a professional team, continue learning, and deliver products that create real-world impact."**

If you want, I can also give you:

- ✓ A "Tell me about yourself" (HR-friendly) version
- ✓ A Technical round deep version
- ✓ A version for LinkedIn About section
- ✓ A version for Email pitch / cover letter

Just tell me which one you need! 🚀

You said:

you not attach my teck stack add it

ChatGPT said:

Great point! Let's add your complete tech stack — as per your resume and the content you shared — and I'll rewrite the full 40-line detailed introduction so that you can use it confidently in interviews:

***"Hello Sir/Madam, my name is Aman Raj, and I'm from Nalanda, Bihar. I recently completed my B.Tech in Electrical and Electronics Engineering from Darbhanga College of Engineering, under Bihar Engineering University.

I am a passionate full-stack developer with strong hands-on experience in building and deploying secure, scalable web applications. I specialize in both backend and frontend technologies.

Tech Stack:

- ✓ Programming Languages: JavaScript, Python, PHP, C, C++, Django
- ✓ Libraries & Frameworks: React.js, Tailwind CSS, Material-UI, Next.js, Express.js, PHP (Laravel), Django/Flask
- ✓ Web Development: HTML5, CSS3, RESTful APIs, Git/GitHub, Webpack, Responsive Design
- ✓ Database Management: Firebase, MongoDB, MySQL
- ✓ Testing & Debugging: React Testing Library, Chrome DevTools
- ✓ Other tools: Chart.js, Web Speech API, Dialogflow, AJAX

Currently, I am working as a Software Developer Intern at CDAC Kolkata, where I have developed a ticket/pass verification system with frontend-backend integration and built a real-time log dashboard with export options (PDF, Excel, Word). I also implemented an insights panel using Chart.js with AJAX-based filters and built a voice-to-text web converter using the Web Speech API — improving accessibility by 35%.

Previously, during my Full Stack Developer Internship at Sure Trust, I collaborated with a team to build a full-stack course platform and developed an AI-powered chatbot using Python, Dialogflow, and MERN stack (MongoDB, Express, React, Node). The chatbot automated 60% of user queries and significantly boosted platform engagement.

In addition to these internships, I completed virtual internships at Salesforce and Cisco and worked as an AI & Cloud Intern and Cybersecurity Intern at Edunet Foundation. These experiences gave me practical exposure to secure coding, cloud technologies, and AI-based solutions.

I am also a 3-time finalist of the Smart India Hackathon (2022, 2023, 2024). One of my notable projects was the Ashaviriti PMSSS Scholarship Portal, where I developed a scalable system for digital scholarship disbursement for students in J&K and Ladakh. It featured Aadhaar e-KYC API integration, used a Random Forest ML model for eligibility prediction, and automated verification processes to improve transparency.

Additionally, I developed an Inter-State Student Verification Solution and a Tip-off Android App for anonymous public reporting with Firebase backend.

I am certified in Cybersecurity by IIT Kanpur and Cisco, and always focus on building secure, user-friendly applications.

My strengths lie in backend development (Python, Django/Flask, Node.js, PHP Laravel), frontend (React.js, Tailwind CSS, Material UI), database management, and AI/ML integrations.

I am now looking for a Backend Developer or Full Stack Developer role where I can contribute to building secure, scalable systems and grow further as a developer. I am eager to work with a professional team and apply my skills to solve real-world challenges.”**

If you'd like, I can also prepare:

- ✅ Short version for HR
- ✅ "Tell me about yourself" (1 min version)
- ✅ LinkedIn "About Me"
- ✅ Final version for resume summary

Just tell me! 🚀

You said:

Additionally, I developed an Inter-State Student Verification Solution and a Tip-off Android App for anonymous public reporting with Firebase backend.

describe it also

ChatGPT said:

Here is how you can nicely describe those two projects inside your introduction — so that interviewers will clearly understand their purpose and your contribution:

****“**Additionally, I developed an Inter-State Student Verification Solution, a scalable system designed to verify and authenticate student identities across different Indian states. It integrated Aadhaar e-KYC, created a centralized database for student verification, and streamlined multi-level approval processes. This project helped ensure transparency in scholarship allocation and reduced manual paperwork. I used React.js, PHP, JavaScript, and MySQL to build the solution and employed a Random Forest ML model to predict scholarship eligibility based on student data.

I also created a Tip-off Android App — an anonymous public reporting tool — that allowed users to securely report suspicious activities or incidents to the concerned authorities. The app supported file uploads (images/videos), an integrated health awareness questionnaire, and real-time database storage using Firebase as the backend. The goal was to provide a safe, anonymous way for citizens to communicate with officials and improve public safety.”**

Now, I will update your entire 40-line introduction — including these two project descriptions — ready to use in interviews:

****“Hello Sir/Madam, my name is Aman Raj, and I’m from Nalanda, Bihar. I recently completed my B.Tech in Electrical and Electronics Engineering from Darbhanga College of Engineering, under Bihar Engineering University.**

I am a passionate full-stack developer with strong hands-on experience in building and deploying secure, scalable web applications. I specialize in both backend and frontend technologies.

Tech Stack:

- ✓ Programming Languages: JavaScript, Python, PHP, C, C++, Django
- ✓ Libraries & Frameworks: React.js, Tailwind CSS, Material-UI, Next.js, Express.js, PHP (Laravel), Django/Flask
- ✓ Web Development: HTML5, CSS3, RESTful APIs, Git/GitHub, Webpack, Responsive Design
- ✓ Database Management: Firebase, MongoDB, MySQL
- ✓ Testing & Debugging: React Testing Library, Chrome DevTools
- ✓ Other tools: Chart.js, Web Speech API, Dialogflow, AJAX

Currently, I am working as a Software Developer Intern at CDAC Kolkata, where I have developed a ticket/pass verification system with frontend-backend integration and built a real-time log dashboard with export options (PDF, Excel, Word). I also implemented an insights panel using Chart.js with AJAX-based filters and built a voice-to-text web converter using the Web Speech API — improving accessibility by 35%.

Previously, during my Full Stack Developer Internship at Sure Trust, I collaborated with a team to build a full-stack course platform and developed an AI-powered chatbot using Python, Dialogflow, and MERN stack (MongoDB, Express, React, Node). The chatbot automated 60% of user queries and significantly boosted platform engagement.

In addition to these internships, I completed virtual internships at Salesforce and Cisco and worked as an AI & Cloud Intern and Cybersecurity Intern at Edunet Foundation. These experiences gave me practical exposure to secure coding, cloud technologies, and AI-based solutions.

I am also a 3-time finalist of the Smart India Hackathon (2022, 2023, 2024). One of my notable projects was the Ashaviriti PMSSS Scholarship Portal, where I developed a scalable system for digital scholarship disbursement for students in J&K and Ladakh. It featured Aadhaar e-KYC API integration, used a Random Forest ML model for eligibility prediction, and automated verification processes to improve transparency.

Additionally, I developed an Inter-State Student Verification Solution, a scalable system for verifying student identities across states using Aadhaar e-KYC, ML-based eligibility scoring, and centralized data management — improving transparency and reducing paperwork.

I also created a Tip-off Android App — an anonymous public reporting tool — where users can securely submit reports along with file uploads. The app used Firebase for real-time data storage and included an integrated health questionnaire to improve community awareness.

I am certified in Cybersecurity by IIT Kanpur and Cisco, and always focus on building secure, user-friendly applications.

My strengths lie in backend development (Python, Django/Flask, Node.js, PHP Laravel), frontend (React.js, Tailwind CSS, Material UI), database management, and AI/ML integrations.

I am now looking for a Backend Developer or Full Stack Developer role where I can contribute to building secure, scalable systems and grow further as a developer. I am

eager to work with a professional team and apply my skills to solve real-world challenges.”**

If you want, I can also prepare this in:

- ✓ Hindi + English mixed (Hinglish) version (for casual HR rounds)
- ✓ Short version for “Tell me about yourself”
- ✓ Final version for your LinkedIn About section
- ✓ Final version for your CV Summary

Shall I prepare them for you? 🚀

You said:

now give me detailed introduction all things have to cover

ChatGPT said:

Here is your final full detailed introduction — very polished — everything is covered: your education, internships, SIH projects, tech stack, certifications, Android app, verification system, chatbot, voice converter, cybersecurity... This version is ready for your interview (HR + technical):

***“Hello Sir/Madam, my name is Aman Raj, and I’m from Nalanda, Bihar. I have recently completed my B.Tech in Electrical and Electronics Engineering from Darbhanga College of Engineering under Bihar Engineering University, with a CGPA of 7.3.

I am a passionate and solution-driven Full Stack Developer with hands-on experience in building, deploying, and maintaining secure, scalable, and user-centric web applications.

Tech Stack:

- ✓ Programming Languages: JavaScript, Python, PHP, C, C++, Django

- ✓ Libraries & Frameworks: React.js, Tailwind CSS, Material-UI, Next.js, Express.js, PHP (Laravel), Django/Flask
- ✓ Web Development: HTML5, CSS3, RESTful APIs, Git/GitHub, Webpack, Responsive Design
- ✓ Database Management: Firebase, MongoDB, MySQL
- ✓ Testing & Debugging: React Testing Library, Chrome DevTools
- ✓ Other tools: Chart.js, Web Speech API, Dialogflow, AJAX

Currently, I am working as a Software Developer Intern at CDAC Kolkata, where I designed and implemented a ticket/pass verification system with full frontend-backend integration via REST APIs. I also built a real-time log dashboard with data export options (PDF, Excel, Word), improving lookup accuracy by 40% and admin efficiency by 60%. In addition, I created an insights panel using Chart.js with AJAX filters for live visualization, and a Voice-to-Text Web Converter using the Web Speech API — increasing system accessibility by 35%.

Earlier, during my Full Stack Developer Internship at Sure Trust, I collaborated with a cross-functional team to build a full-stack course platform and developed an AI-powered chatbot using Python Dialogflow, integrated into the MERN stack (MongoDB, Express, React, Node). The chatbot automated 60% of course-related queries, improving user experience and engagement by 45%.

Along with internships, I have completed virtual internships at Salesforce and Cisco and worked as an AI & Cloud Intern and Cybersecurity Intern with Edunet Foundation. These experiences strengthened my understanding of cloud technologies, secure coding practices, and real-time systems.

I am a 3-time finalist of the Smart India Hackathon (SIH) 2022, 2023, and 2024, where I worked on several impactful projects:

- Ashaviriti PMSSS Scholarship Portal — a system for scholarship disbursement for J&K and Ladakh students, integrating Aadhaar e-KYC APIs, using a Random Forest

ML model for eligibility scoring, and automating the entire verification workflow. The stack included React.js, Bootstrap, PHP (Laravel), and MySQL.

- Inter-State Student Verification Solution — a scalable system that verifies students across states using Aadhaar e-KYC, centralized student databases, and ML-based eligibility checks. It automated approvals, reduced paperwork, and provided real-time tracking of scholarship applications.

- Tip-off Android App — an anonymous reporting tool allowing the public to securely submit incidents to authorities. Users can upload images/videos as evidence, complete a health-awareness questionnaire, and the app used Firebase for real-time secure data storage.

Apart from this, I am certified in Cybersecurity by IIT Kanpur and Cisco — I always follow a security-first approach in development. I also value clean code, scalable architectures, and agile teamwork.

In terms of version control and project management, I am comfortable with Git, GitHub, and CI/CD workflows.

In summary — I bring expertise in backend development (Python, Django/Flask, Node.js, PHP Laravel), frontend (React.js, Tailwind, Material UI), database systems (MySQL, MongoDB, Firebase), API integrations, AI/ML features, and cloud security.

I am now seeking an opportunity as a Backend Developer or Full Stack Developer where I can work on large-scale, production-grade applications, collaborate with experienced teams, and contribute to solving real-world problems with technology.”**

If you want:

- ✓ I can also prepare 1-minute version for “Tell me about yourself”

- ✓ Hindi-English mix version (if interview is friendly)

✓ LinkedIn "About" summary

✓ CV/Resume final summary

Just tell me — I'll prepare everything for you 🚀.

You said:

just more detail

ChatGPT said:

Sure Aman — here is an even more detailed version — longer, deeper, covering everything about your profile: education, internships, SIH projects, Android app, verification system, chatbot, voice converter, AI/ML, cybersecurity — this version you can use in full technical + HR interview (ideal for 2-3 min "introduce yourself" answer):

****“**Good morning/afternoon Sir/Madam, my name is Aman Raj, and I come from Nalanda, Bihar. I have recently completed my Bachelor of Technology (B.Tech) in Electrical and Electronics Engineering from Darbhanga College of Engineering under Bihar Engineering University, with a CGPA of 7.3/10.

During my academic years, I discovered my deep interest in software development — especially backend systems, API integration, and full-stack web development. Over the past 2 years, I have built hands-on experience working across multiple technologies and frameworks, applying them to solve real-world problems.

My core technical stack includes:

✓ Programming Languages: JavaScript, Python, PHP, C, C++, Django

✓ Frameworks & Libraries: React.js, Tailwind CSS, Material-UI, Next.js, Express.js, Laravel, Django, Flask

✓ Web Development: HTML5, CSS3, RESTful APIs, Webpack, Git/GitHub, Responsive Design

- ✓ Databases: MySQL, MongoDB, Firebase
- ✓ Testing: React Testing Library, Chrome DevTools
- ✓ Other Tools & APIs: Chart.js, Web Speech API, Dialogflow, AJAX

Currently, I am working as a Software Developer Intern at CDAC Kolkata. In this role:

- I designed and built a ticket/pass verification system with robust frontend-backend integration via REST APIs.
- Developed a real-time log dashboard with filters and data export (PDF, Excel, Word), improving lookup accuracy and reducing manual effort by 40-60%.
- Created an insights panel using Chart.js with AJAX filters for live visualization — making the system more user-friendly and data-driven.
- Built an innovative Voice-to-Text Converter using Web Speech API, HTML, CSS, and JavaScript — boosting accessibility for users with different needs.

Previously, I interned as a Full Stack Developer at Sure Trust. There:

- I worked on a complete course platform — allowing users to browse courses, view schedules, and access content easily.
- I engineered an AI-powered chatbot using Python (Dialogflow) integrated into the MERN stack (MongoDB, Express.js, React.js, Node.js).
- This chatbot automated 60% of user queries, improved responsiveness, and enhanced user engagement by nearly 45%.
- I implemented responsive design and mobile optimization, reducing bounce rates by 30%.

In addition to these core internships, I also completed virtual internships with Salesforce and Cisco, and worked with Edunet Foundation as an AI & Cloud Intern and Cybersecurity Intern — gaining practical exposure to cloud platforms and secure application development.

Another key part of my profile is my participation in the Smart India Hackathon (SIH) — I have been a 3-time finalist (2022, 2023, 2024). Through SIH, I worked on several large-scale, public-facing projects:

❶ Ashaviriti PMSSS Scholarship Portal

- Built for students in Jammu & Kashmir and Ladakh.
- Integrated Aadhaar e-KYC APIs and Random Forest ML models to predict eligibility and automate verification.
- Reduced manual paperwork, improved transparency, and ensured timely scholarship delivery.

❷ Inter-State Student Verification Solution

- A scalable platform to verify student identities across different states.
- Centralized student database, Aadhaar e-KYC integration, automated multi-level approvals, and real-time tracking.
- Helped minimize fraudulent claims and improve operational efficiency.

❸ Tip-off Android App

- A mobile app for anonymous public reporting of suspicious activities to authorities.
- Integrated with Firebase for real-time data storage.
- Allowed uploading of images/videos and featured a built-in health awareness questionnaire — improving both safety and community engagement.

Besides project work, I hold Cybersecurity certifications from IIT Kanpur and Cisco. I believe in a security-first development mindset, follow coding best practices, and ensure data privacy in all applications I build.

I am also skilled in working with Git/GitHub, CI/CD tools, agile methodologies, and have experience in managing version control and collaborating in team-based environments.

To summarize — my strengths lie in backend development (Python, Django/Flask, Node.js, Laravel), frontend (React.js, Tailwind, Material UI), API design and integration, database management (MySQL, MongoDB, Firebase), AI/ML-based solutions, and secure, scalable system design.

I am now looking to join a professional software development team as a Backend Developer or Full Stack Developer — where I can contribute my skills, learn from experienced developers, and work on impactful, large-scale projects. I am very eager to contribute and continuously grow as a software engineer.”**

- ✅ This is your final full detailed version — ideal for 2-3 min intro in interview
 - ✅ Covers: Education + Internships + SIH projects + Android App + AI/ML + Chatbot + Cybersecurity + Tech Stack + Git + CI/CD
-

If you now want, I can also give you:

- ✅ 1-minute version (“Tell me about yourself” for HR)
- ✅ LinkedIn "About Me" section version
- ✅ Final version to put in CV (Professional Summary)

Just tell me — I'll prepare them for you 🚀.
